About Me

UX/UI Designer with 2+ years of experience designing complex B2B/Enterprise products (fintech, corporate tools). Grew from intern to mid-level at iTechArt. Specialize in working with complex data, designing mobile versions of corporate products, integrating AI solutions, and building AI-ready design systems. Skilled in optimizing information architecture, working with role-based models (RBAC), and building consistent UX.

Work Experience

iTechArt

Period:
Oct 2024 — Aug 2026

Position:
UX/UI Designer

Products:
Internal corporate tools for business process automation (Financial Tool, Travel & Expense).

Key Achievements and Tasks:

AI/OCR Integration: Designed a user flow for auto-filling forms based on OCR and AI receipt analysis, with per-field confidence statuses and a document-level trust summary. The feature shipped as opt-in (disabled by default) to keep users in control, plus a trust-first approval side where managers and accountants see exactly what AI filled. Replaced manual re-typing of receipt data in expense and corporate-card reporting.

Information Architecture (IA) Optimization: Redesigned a complex analytics page in the Travel product. Applied progressive disclosure principles: moved key decision-making blocks to a fixed top section (sticky) and hid detailed data in drawers. This reduced content length by ~20%, made key information always accessible, and improved analysis speed.

Complex B2B Product Design: Designed a corporate cards and reporting module from scratch. Successfully reworked user flows in the Travel product to accommodate changing business processes with a complex role model (5+ roles).

Mobile UX: Developed and built mobile versions for both products from scratch, adapting complex dashboards, forms, and tables for convenient smartphone use.

Design System and Redesign: Conducted a global product redesign for unification with the company's internal ecosystem, reducing cognitive load when switching between applications. Created custom graphics and animations for the new DS, which increased user emotional response (noted in qualitative feedback).

AI-Ready Design System for AI Agents: Participated in designing a design system adapted for autonomous implementation by AI agents. Detailed component specifications, their states, and design token semantics so AI agents could independently connect to Figma and implement layouts without developer involvement. Simultaneously worked with GitHub Copilot (VS Code) to audit existing code components and optimize their count, reducing duplication and accelerating developer workflow.

Cross-functional Work: Worked both in a classic product team (PM, Dev, QA, Lead Designer) and in a large design department (5 designers), which helped develop communication skills across different formats.

Freelance

Period:
Jul 2024 — Oct 2024

Position:
UI Designer

Key Tasks:

Creating UI cases for the agency portfolio: Developed visual concepts and UI cases that the agency published on Dribbble and other platforms to showcase expertise to potential clients.

Visual modernization of projects: Redesigned and modernized the UI of the studio's outdated work, bringing it in line with current trends and increasing its presentation value.

Education

2025
Google UX Design Certification Program, Coursera, UX Design

2025
IBM Digital Program (Enterprise Design Thinking Course), IBM, Enterprise Design Thinking

2020 — 2024
Minsk State Architectural College, Graphic Design

Skills

Hard Skills:

Core Design
Figma (Advanced: Auto-layout, Components, Variables, Prototyping), Information Architecture, Complex Data Visualization, Mobile B2B, Role-Based Access Control (RBAC), Progressive Disclosure.

Design Systems
DS creation & maintenance, AI-ready components, design tokens semantics, component specification for AI agents.
Animation & Visuals: Jitter, Adobe Photoshop, Illustrator.

Animation & Visuals
Jitter, Adobe Photoshop, Illustrator.

AI Tools
GitHub Copilot (VS Code), Cline, Claude, ChatGPT, DeepSeek (Research, Personas, Copy), Qwen, Recraft, Gemini, Stitch (Visual concepts), Figma AI plugins.

Collaboration & Management
Notion, Miro, Azure DevOps, MS Teams.

Languages
Belarusian (Native), Russian (Native), English (B1 - Intermediate).
